

ISG™ Registration Wristband & Label Printing

Quickly Produce Patient Labels & Wristbands

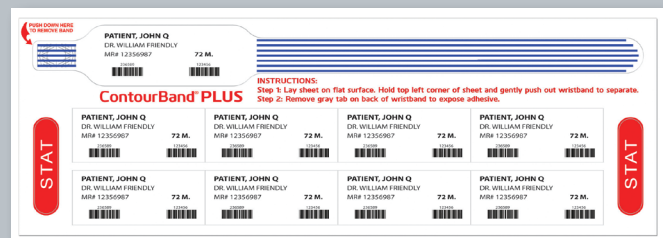

Hospital registration need to quickly produce patient wristbands and labels that must be durable, comfortable, legible, scannable and affordable. Positive patient identification is the core of patient safety.

The information and barcodes required by healthcare institutions change from time to time as new systems are implemented for programs related to labs or medicinal administration. Your ISG dealer can help you improve your process.

With Our Solutions You Can:

- Send any data stream to our intelligent printers and they will format to print the exact wristband and label layout you desire. Included can be specific data, 2D bar code, linear bar code, date/time, and the font/size/location you choose.
- Produce a wristband and multiple labels from one data feed. You can also print variable quantities of labels based on a specific field of data (e.g. type of admission).
- Automatically add the HIMSS recommended suffix to indicate that the patient number is from a wristband and not a label. This is a key patient safety recommendation.
- Quickly and easily add our printers to your network and begin sending streams of data. Very little time is required by your IT staff for setup or installation.
- Use ContourBand® PLUS labels that produce both the patient wristband and eight labels simultaneously.

Identification Systems Group

— The ISG™ is a nationwide network of local experts in identification, security, and card personalization, providing high quality, cost-effective solutions backed by local support and the strength of our Professional Services Certification program. Each company works together to provide seamless nationwide support and collaboration in the identification and card issuance industry.
