

The Identification Systems Group (ISG) Announces Partnership with Safetrust

The ISG is pleased to now offer Safetrust's interoperable mobile credential management solutions in its members' product portfolio.

Shawnee, KS (PRWEB) January 8, 2019

Today, the Identification Systems Group announces its new partnership with mobile credential solutions provider Safetrust. With this new partnership, ISG members in the US and Canada will be able to offer both door and logical access control solutions via mobile credential management to their clients.

Mobile credential authentication and management has been part of the ISG's "Five Year Plan" to keep the group at the forefront of emerging identification technology. With the ubiquity of mobile devices in use across all market segments, and recent security advancements in the integration of mobile devices with tokens, certificates and application program interfaces (API), a reliable, proven mobile solution was sought out by the ISG's board.

"Having Safetrust...as a viable mobile access ...solution is a major bonus," says Tom Stiles, the ISG's Executive Director.

With an increased demand for a mobile solution that could work alongside legacy access control technologies, as well as a standalone mobile access solution, the Safetrust offering was impossible to ignore. After a thorough review of their solution portfolio, and testing with other ISG access control products, it was determined that the Safetrust line of SABRE products was a perfect fit for the ISG.

"Safetrust solutions can work with almost any door access system, without having to replace existing readers or cards," said Tom Stiles, the ISG's Executive Director. "This allows our current client base to continue using their working access control systems, while slowly integrating toward either an independent mobile access solution, or using mobile access as a second tier of authentication. Having Safetrust in our corner as a viable mobile access control and credential management solution is a major bonus for ISG dealers."

"Safetrust shares a commitment with the ISG to deliver secure and reliable mobile-centric solutions for access control in the modern enterprise," said Jason Hart, CEO at Safetrust. "We look forward to exploring opportunities with the ISG to extend the benefits of using trusted identities on mobile devices for a variety of building services and applications."

About the ISG

The Identification Systems Group (ISG) is a nationwide network of local experts in identification, security, tracking, and card personalization technologies, providing high quality, cost-effective solutions backed by local support and the strength of our Professional Services Certification program. Each member company works together to provide seamless support and collaboration in the identification and issuance industries across the USA and Canada.
