

**Track**

when & where your
child gets on & off

**Check**

on the bus, on your
mobile device

**Know**

when there's a
change or delay

**Plan**

your day more
easily & effectively

Know your child got on the bus safely

Peace of mind, on your time.

Being able to track a student rider's bus is at any given moment gives parents and guardians one less thing to worry about. And reliable bus information when things change makes planning the day easier.

More flexibility for a smoother day.

Each student rider carries a small card that they scan each time they board and exit their bus. The scanner, which is installed on the bus, logs their student ID number, date, location and time of that scan. That information is immediately—and securely—available to the authorized parent on their MyView mobile app.

Parents know what's going on and when.

- Be instantly alerted in the app or via text when their rider gets on and off the bus.
- Receive timely updates regarding bus or route changes.

Districts can also add bus tracking so parents can choose how to track their child's bus.

- Custom-build zones and create proximity-based alerts.
- Add multiple zones for different drop-off destinations.
- Eliminate unnecessary alerts by associating each zone to relevant buses.
