Track student ridership safely and securely.

Put digital ridership insights to work.

Students are precious cargo. [Zonar ZPass®](#) delivers in-depth ridership data so you can transport them safely while making the most of your fleet, drivers and fuel.

- Access ridership data online to see who's on which bus, as well as when and where they entered or exited.
- Analyze routes, stops and ridership trends to optimize efficient use of resources such as vehicles, drivers and fuel.
- Know who is on which bus at any moment in case there's an emergency.
- Quickly and accurately help parents make sure their child is safe on board.
- Streamline and maximize Medicaid reimbursement reporting while reducing your risk of an audit.

Optimize routes and stops.

Build safer, more efficient routes by knowing your ridership counts for each bus and stop in detail.

- Identify which stops are used most and least.
- Build routes based on real-world activity.
- Save time by reducing the number of stops.
- Assign buses to areas with greater ridership.
- Combine routes, schedules and service.

Keep rider information secure.

Each RFID card is always—and only—associated to a unique identification number. No personal student information is captured or stored.

Riders scan a passive RFID card to the Z Pass reader by the bus door as they board and exit.

Z Pass securely captures and transmits the date, time and location of the scan.

Authorized personnel have instant, online access through [Zonar Ignition™](#).

Assist officials during emergencies.

The school bus is the safest way to transport students. Still, if there's an emergency, Z Pass ridership data can prove invaluable.

- Immediately inform officials and first responders who's on the bus if there's an incident.
- Help search for missing children by quickly identifying who got off, where and when.

Let's hope you never need to, but it's best to be prepared just in case.

Easily maximize Medicaid reimbursement.

Add to fleet revenue and reduce audit risk. Use Z Pass to digitally pull and submit data required for Medicaid reimbursement.

Easy, accurate and takes a fraction of the time of manual reporting.

Add more layers of safety.

Use Z Pass with our Zonar Bus Suite™ routing solution to protect student ridership and provide parents peace-of-mind.

Prevent wrong bus, wrong stop incidents.

Put the Bus Suite driver app on every tablet, so they can visually confirm right student, right bus, right stop—every time.

Empower parents to track the bus.

Parents use the Bus Suite parent app to track their child's bus on their own, and to make sure their child got on or off safely; without calling you.

Expand insights to classrooms.

Install Z Pass readers inside classrooms, cafeterias, libraries and other locations within the building. Confirm who's where in case of emergency.

Key features

- RFID reader
- Passive RFID cards
- Immediate data transmission
- Simple mounting system
- Low-power sleep mode
- Web-based reporting
- Digital Medicaid reimbursement reporting
- Zonar Bus Suite compatible
