The Identification Systems Group (ISG) Announces Partnership with BioConnect

BioConnect offers a wide assortment of biometric access solutions for mobile authentication, facial recognition, asset security and more

Morganton, NC (PRWEB) December 14, 2022

BioConnect, in Toronto, ON, was the first to bring a biometric mobile authenticator to market for physical access back in 2016, allowing organizations to secure their own physical doors and spaces with the use of biometric identity verification through their BioConnect mobile application or existing IT authenticators such as Okta, Duo and PingID from a mobile device.

Since then, BioConnect has introduced their Trust Platform, which enables organizations to connect all of their existing access control systems, biometric readers, mobile authenticators and small-space access control into a single, unified system.

“Having BioConnect as a partner increases the ISG’s biometric offering nearly tenfold,” says David Lee, Executive Director of the ISG.

BioConnect also offers a wide range of fingerprint and facial recognition readers as well as thermal cameras, security cabinets, asset lockers and safes, plus software for connecting devices on a single campus or across a multi-site enterprise.

“We look forward to working with all the ISG partners to bring higher levels of security to the most critical access points. At its core, BioConnect is dedicated to helping organizations protect physical access at scale with the industry’s highest level of security and risk controls to enhance privacy and compliance,” commented Rob Douglas, Founder and CEO of BioConnect.

“Having BioConnect as a partner increases the ISG’s biometric offering nearly tenfold,” said David Lee, the Executive Director of the ISG. “Their BioConnect Link solution with their Mobile Authenticator works with existing access readers to provide an entirely new level of security for organizations that want to implement mobile credentials for access control.”

About BioConnect

BioConnect offers solutions to the toughest security problems that an enterprise faces. Their award winning, Trust Platform is a one-stop solution providing security at scale that establishes a strong level of trust by unifying a person's identity across physical, IoT and digital applications. With advanced cybersecurity, an adaptive authentication experience that evolves as your threat landscape changes, and their Privacy & Compliance Toolkit, BioConnect not only addresses all the security concerns of an enterprise but sets the standard for a world-class security experience. The company is based in Toronto, Canada and is passionately powered by the brightest and most forward-thinking minds. With over 50 BioConnectors, they are quickly growing and transforming the future of physical access security solutions.
